Medical Summary

Riverbend Geriatric Clinic
45 Orchard Hill Drive, Fernhill, Westmarch 00417
Patient: Harold P. Ennis
Date of birth: April 11, 1945
Date of summary: May 28, 2026
Prepared by: Dr. Imani Okafor, geriatric medicine

Diagnoses

- Parkinson's disease, moderate stage, diagnosed 2021
- Orthostatic hypotension
- History of three falls at home in the past six months, most recently on May 9, 2026

Functional status

Mr. Ennis needs hands-on help with bathing and with getting in and out of the tub. He needs help with buttons and fasteners when dressing. He needs standby help moving from bed to chair because of freezing episodes. He misses medication doses unless reminded; his medication schedule has four daily doses.

He walks short distances with a rolling walker. He is not able to prepare hot meals safely.

Recommendation

In my opinion Mr. Ennis needs a personal care aide for at least 20 hours per week to remain safely at home. Without assistance, his risk of a serious fall is high.

Signed: Dr. Imani Okafor. Date: May 28, 2026
